The Crossroad of Life

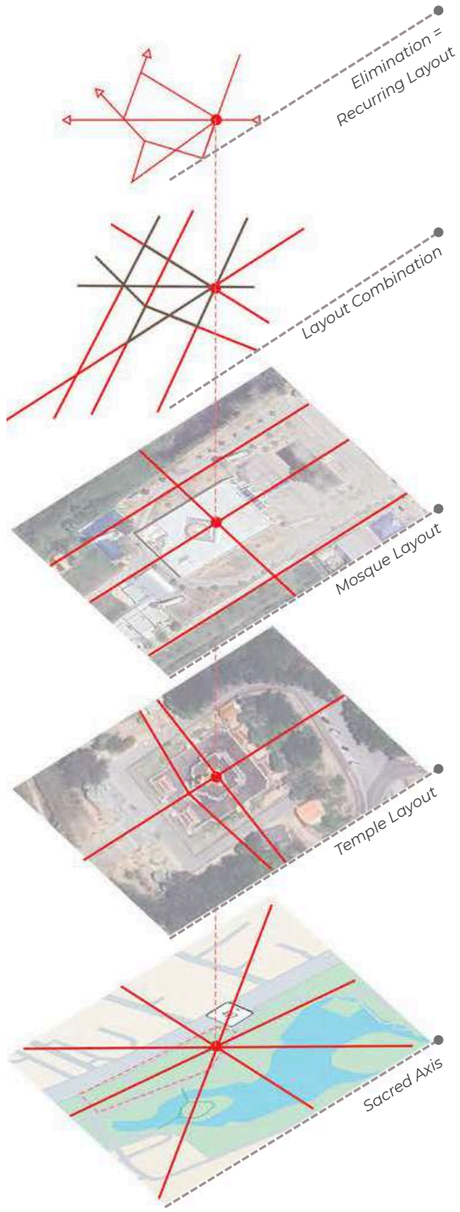

___ Are your choices truly right or wrong?

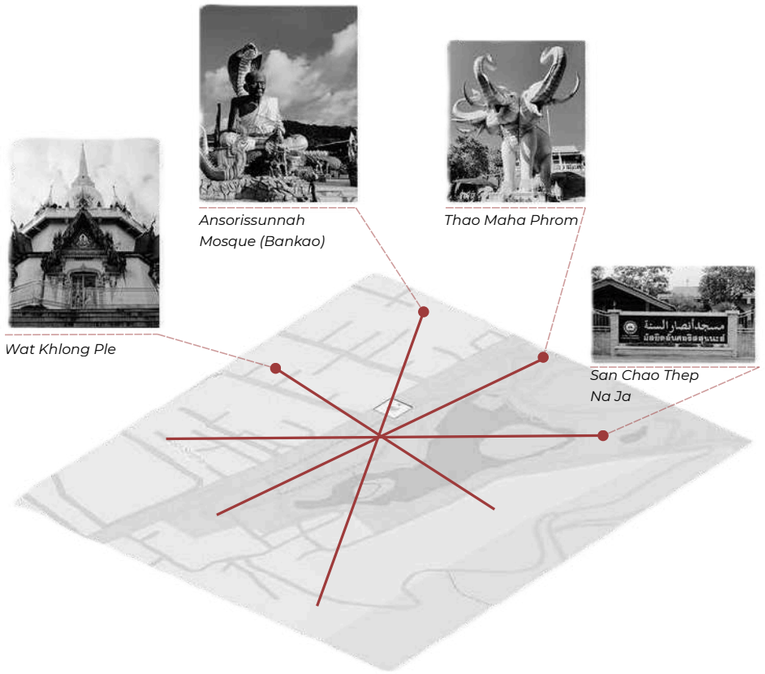

Sophomore Year / Design Studio 4
Site/ Hat Yai Municipal Park, Hat Yai, Songkhla, Thailand
Project Type/ Community Building
Instructor/ Ts. Noorul Fadzlee Khamis, AR. Haziqah Hamzah
Category/ Academic Graduation Project

The interpretive center embodies the journey of human existence, morality, and transcendence through an architectural narrative inspired by religious and philosophical ideologies. The purpose of the design is to transform faith and spirituality into an architectural experience rather than religious instruction. Instead of teaching a specific belief, the interpretive centre encourages visitors to reflect on their own lives, morality, struggles, and purpose through space, movement, and sensory experiences.

The spatial journey guides visitors through The Ordinary World (Earth), The Realm of Shadows (Underworld), and The City of Light (Heaven), symbolizing human struggles, moral dilemmas, redemption, and the pursuit of enlightenment. Each space engages the senses—sight, sound, texture, and smell—creating an immersive atmosphere that encourages introspection and spiritual contemplation.

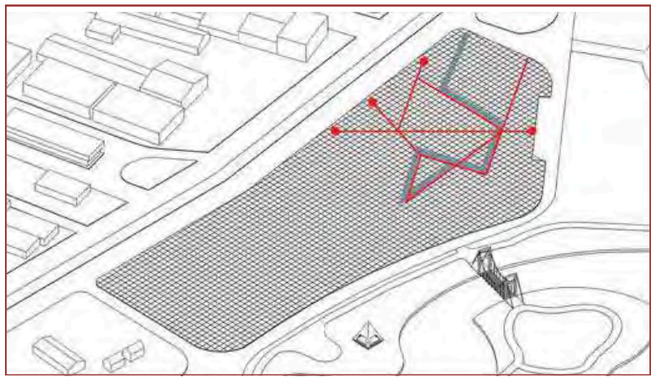

Ultimately, the concept creates a neutral space where people from different religions and backgrounds can connect through shared human experiences, promoting understanding, reflection, and personal interpretation rather than fixed answers.

Sacred Axis
The axis are established at the entrance of the proposed site, intersecting with axis from Wat Khlong Ple (Wat Nampud), Ansorissunnah Mosque (Bankao), Thao Maha Phrom, and San Chao Thep Na Ja, creating a circulation path that integrates the spatial influence of Buddhist and Islamic religious landmarks while guiding visitors through the design.

Recurring Layout
The recurring layout, created by layering Sacred Axis, Mosque and Buddhist temple layouts, reflects the city's religious diversity. Some paths are predestined, while others unfold through choice and experience, shaping the human journey.

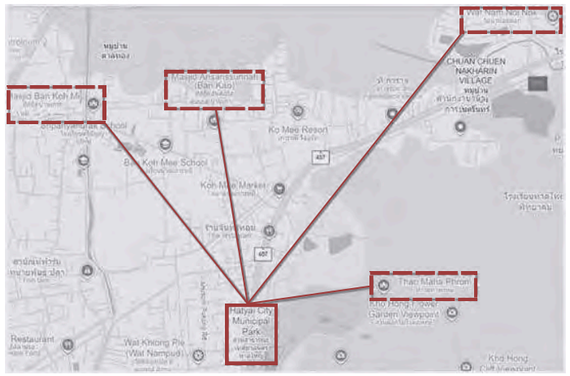

Water Spine

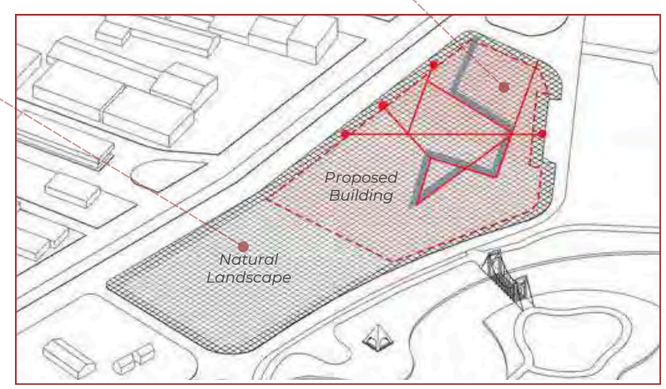

A water spine guides the visitors through the journey, showcasing how important the water in different religious. Water symbolizes purification (Islam), rebirth (Hinduism), and cleansing (Buddhism).

South of the Site

North of the Site

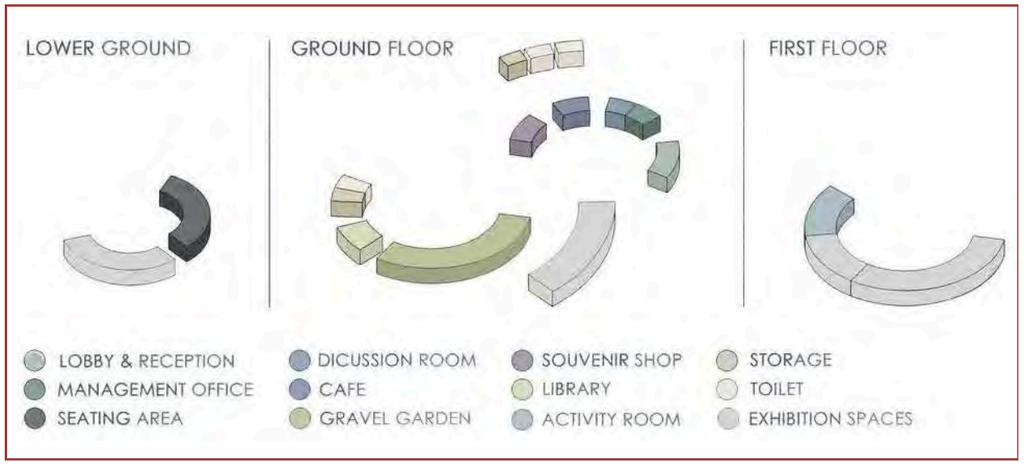

Zoning

The proposed building zone is positioned at the north side, closer to the mosque and temple, reinforcing its connection to sacred spaces and spiritual influence.

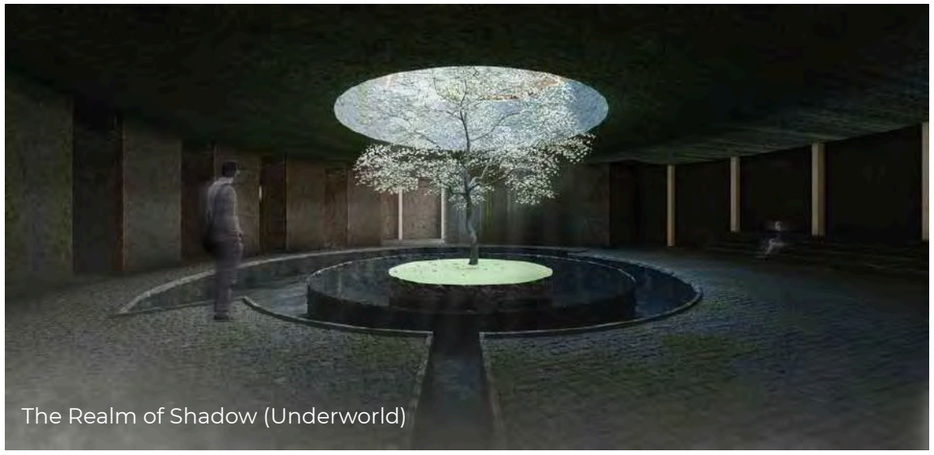

Programming

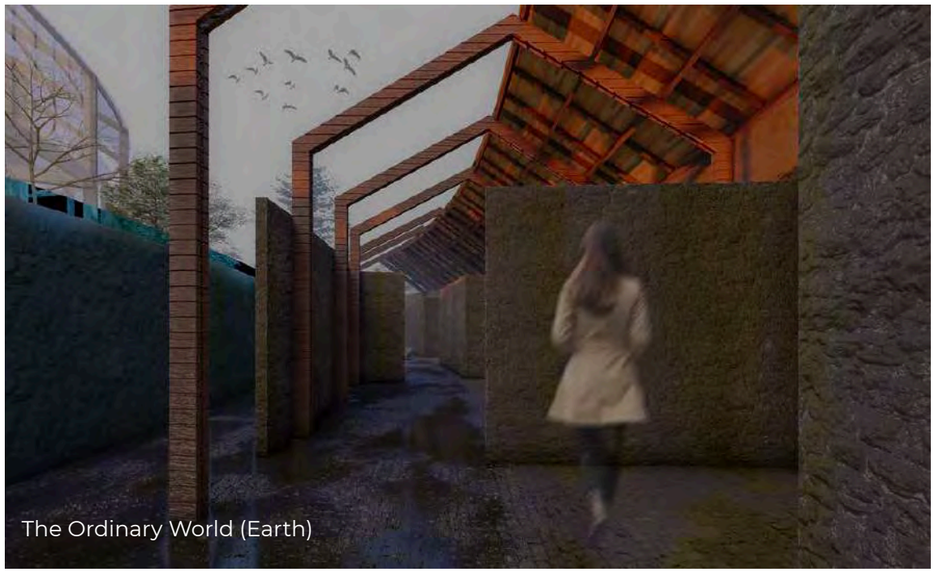

User Experience

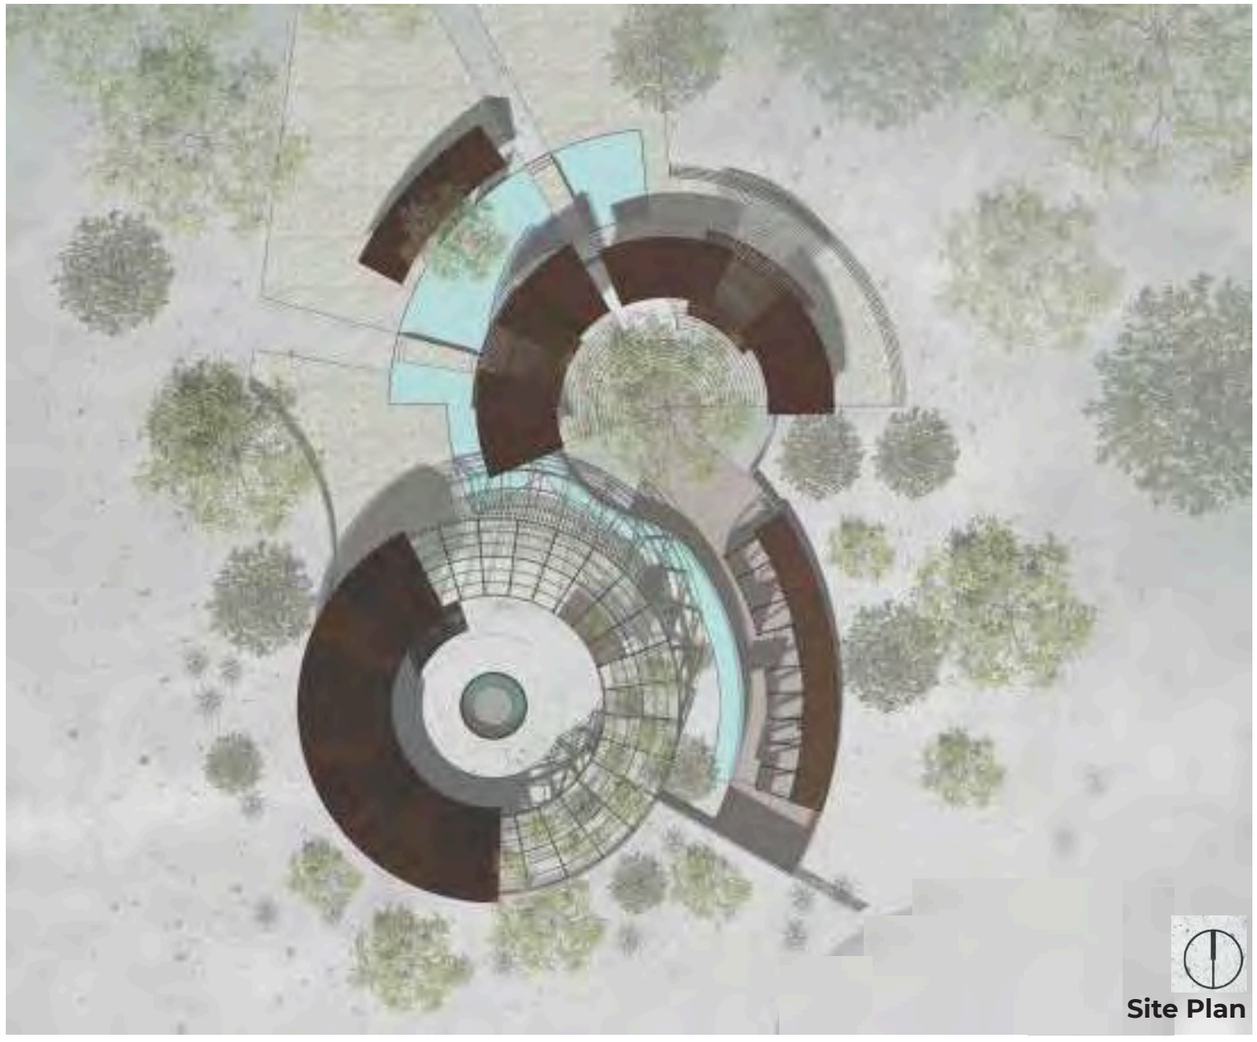

Visitors begin their journey in a tranquil arrival space, gently guided by flowing water and sensory cues. They move through The Ordinary World, navigating a maze-like ramp that mirrors life's struggles. Descending into The Realm of Shadows, they face narrowing paths, heat, and scent—evoking discomfort and deep introspection. Finally, they ascend into The City of Light, an airy, floating space that opens to views of nature and sacred landmarks. The journey ends at the threshold and library, where silence, light, and landscape invite reflection—leaving each visitor with personal insight, questions, or a sense of peace.

MERDEKA MORPHOSIS

Evolution towards sustainable modernism

Sophomore Year/ October 2024
Site/ 29 Jalan Maharajalela 50150 Kuala Lumpur Federal Territory of Kuala Lumpur
Project Type/ Heritage Conservation and Adaptive Reuse Project
Instructor/ AR. Haziqah Hamzah, TS. Noorul Fadzlee Khamis, TS. Jesmie Jelanie
Category/ 2024 CIDB/MSSA Competition

The concept for modernizing Stadium Merdeka draws inspiration from the rich context of the site. **The design aims to blend the past, present, and future, creating a seamless loop that honours Malaysia's heritage while propelling it towards a sustainable and progressive future.**

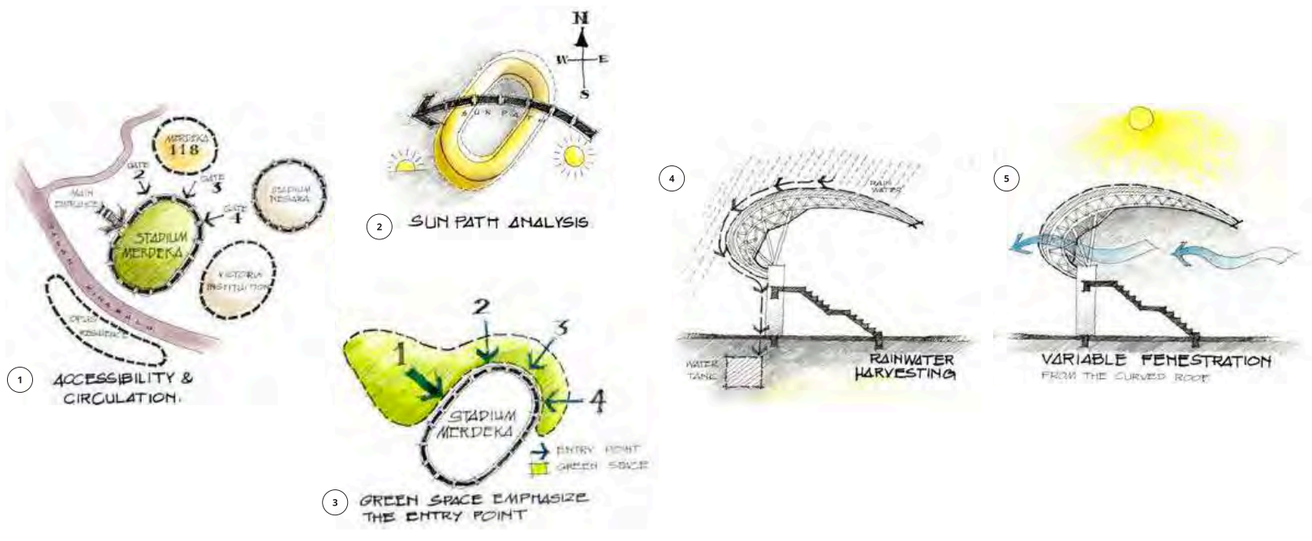

The design is inspired by the architecture of historic local buildings, known for their cultural significance. These traditional elements are thoughtfully integrated into the new design, creating a bridge between the old and the new. The infinity loop of the newly proposed structure wraps around the existing stadium, symbolizing the continuity and protection of Malaysia's independence and cultural identity.

This harmonious blend of traditional and modern elements not only preserves the architectural legacy of the past but also celebrates the stadium's evolution as a beacon of national pride and progress.

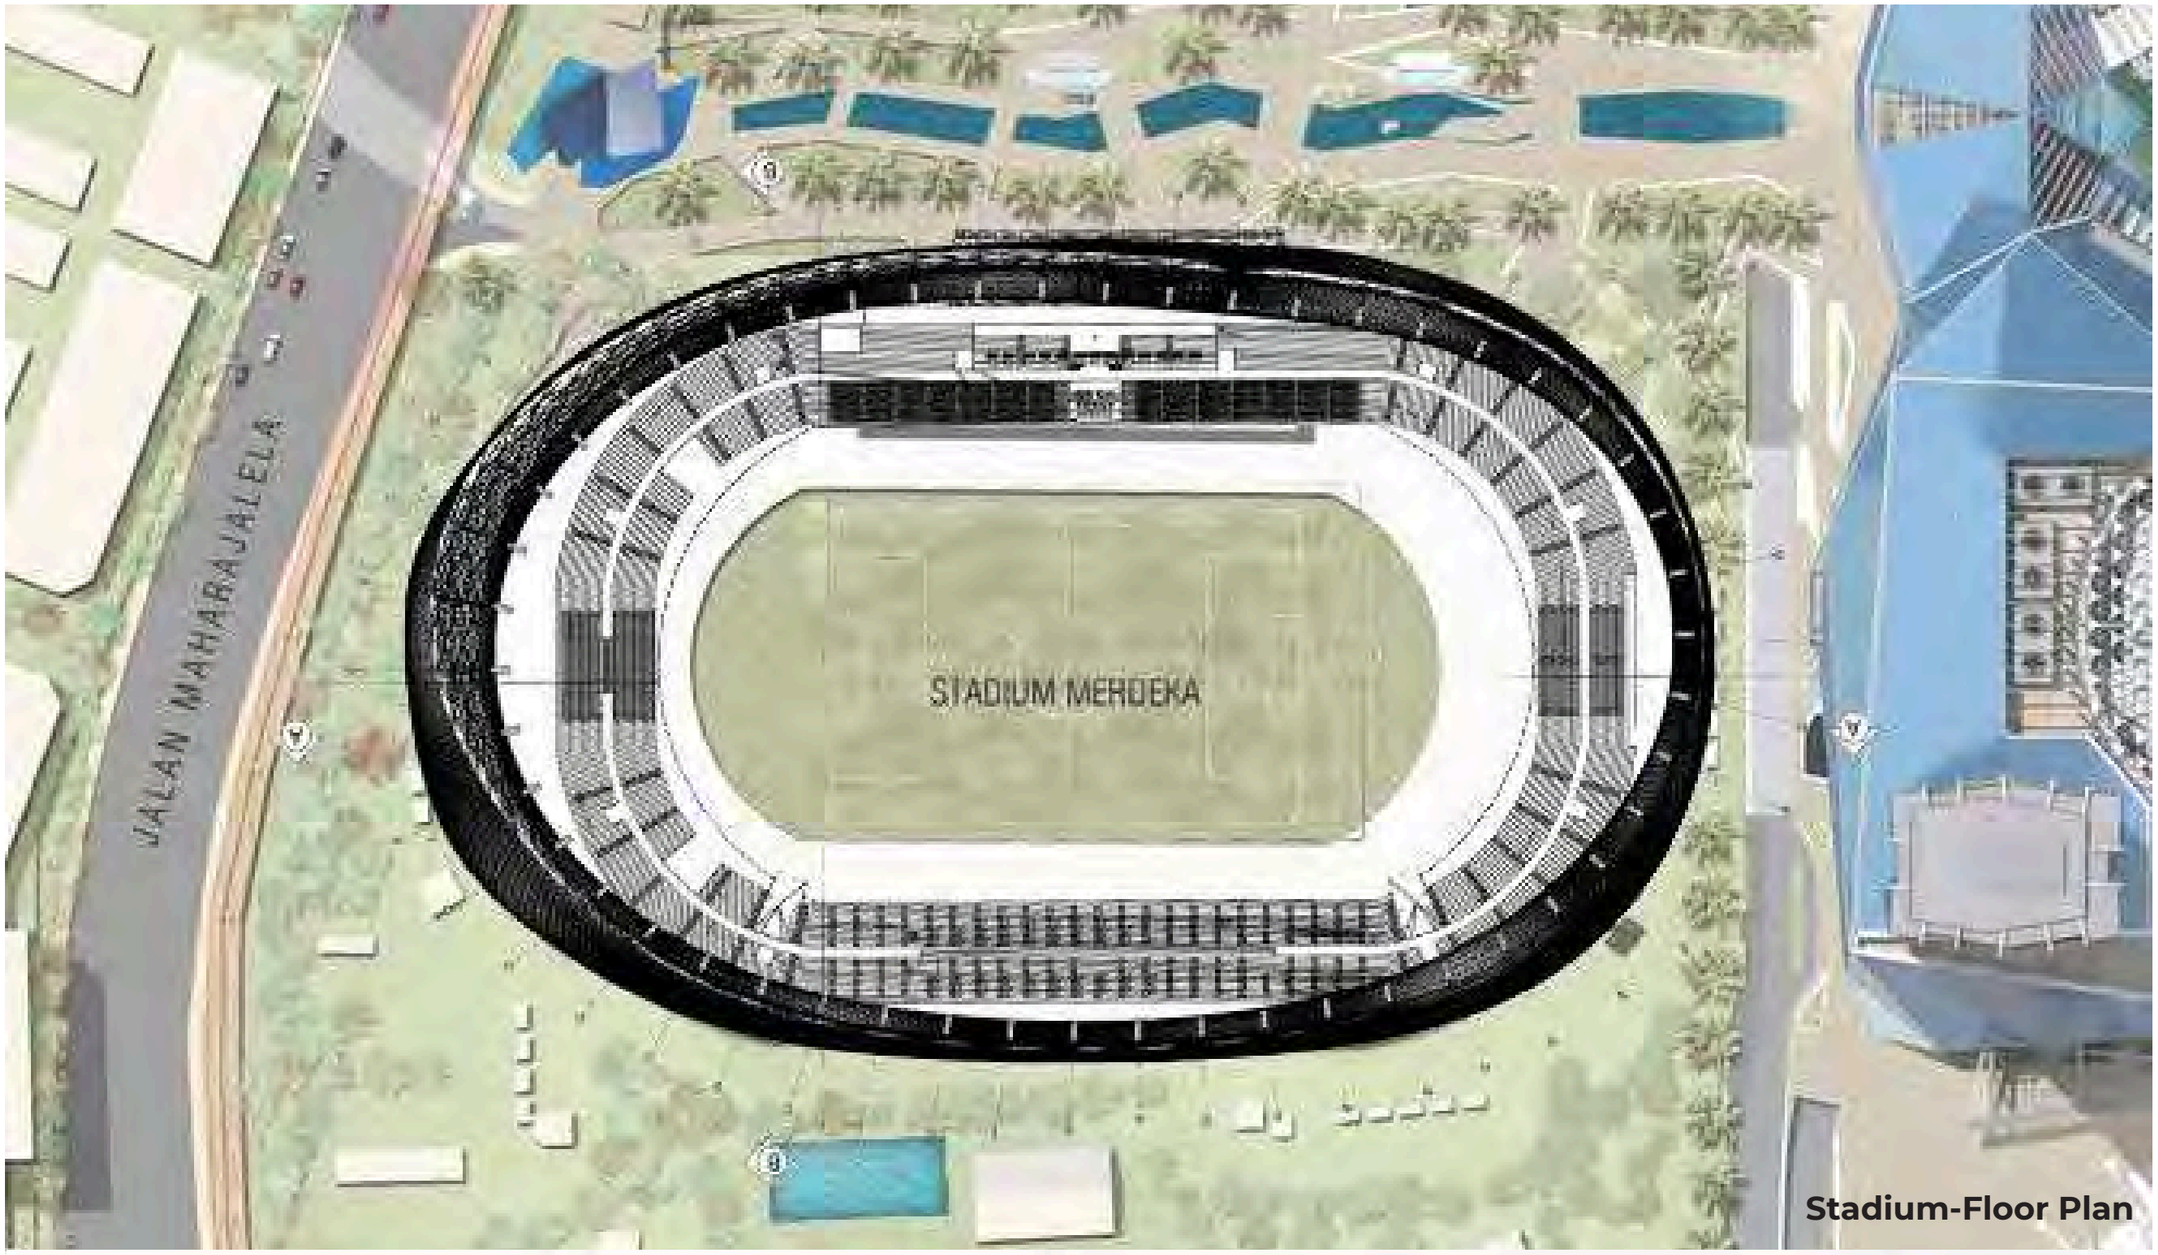

The design represents an ongoing journey, reflecting the perpetual development of the nation, much like the continuous loop of history and growth.

In this way, the old local building, the present Stadium Merdeka, and the Merdeka 118 which looks futuristic form a continuous loop in time, with the new design acting as a bridge that links traditions with future aspirations. This interconnected relationship embodies the spirit of preservation and progress, ensuring that the stadium remains a symbol of Malaysia's enduring legacy and forward-looking vision.

PASAR BORONG GONG PAUH, KUALA TERENGGANU

MARKET REDEVELOPMENT

Junior Year/ September 2025
Site/ Kuala Terengganu, Terengganu
Project Type/ Commercial Market Building
Instructor/ AR. Haziqah Hamzah, Ts. Noorul Fadzlee Khamis
Category/ Pertandingan Rekabentuk Menaiktaraf Pasar Borong Gong Pauh, MB Kuala Terengganu

Shifting Phases, Living Market

The market is conceived as a dynamic organism that evolves through time, both daily and long-term.

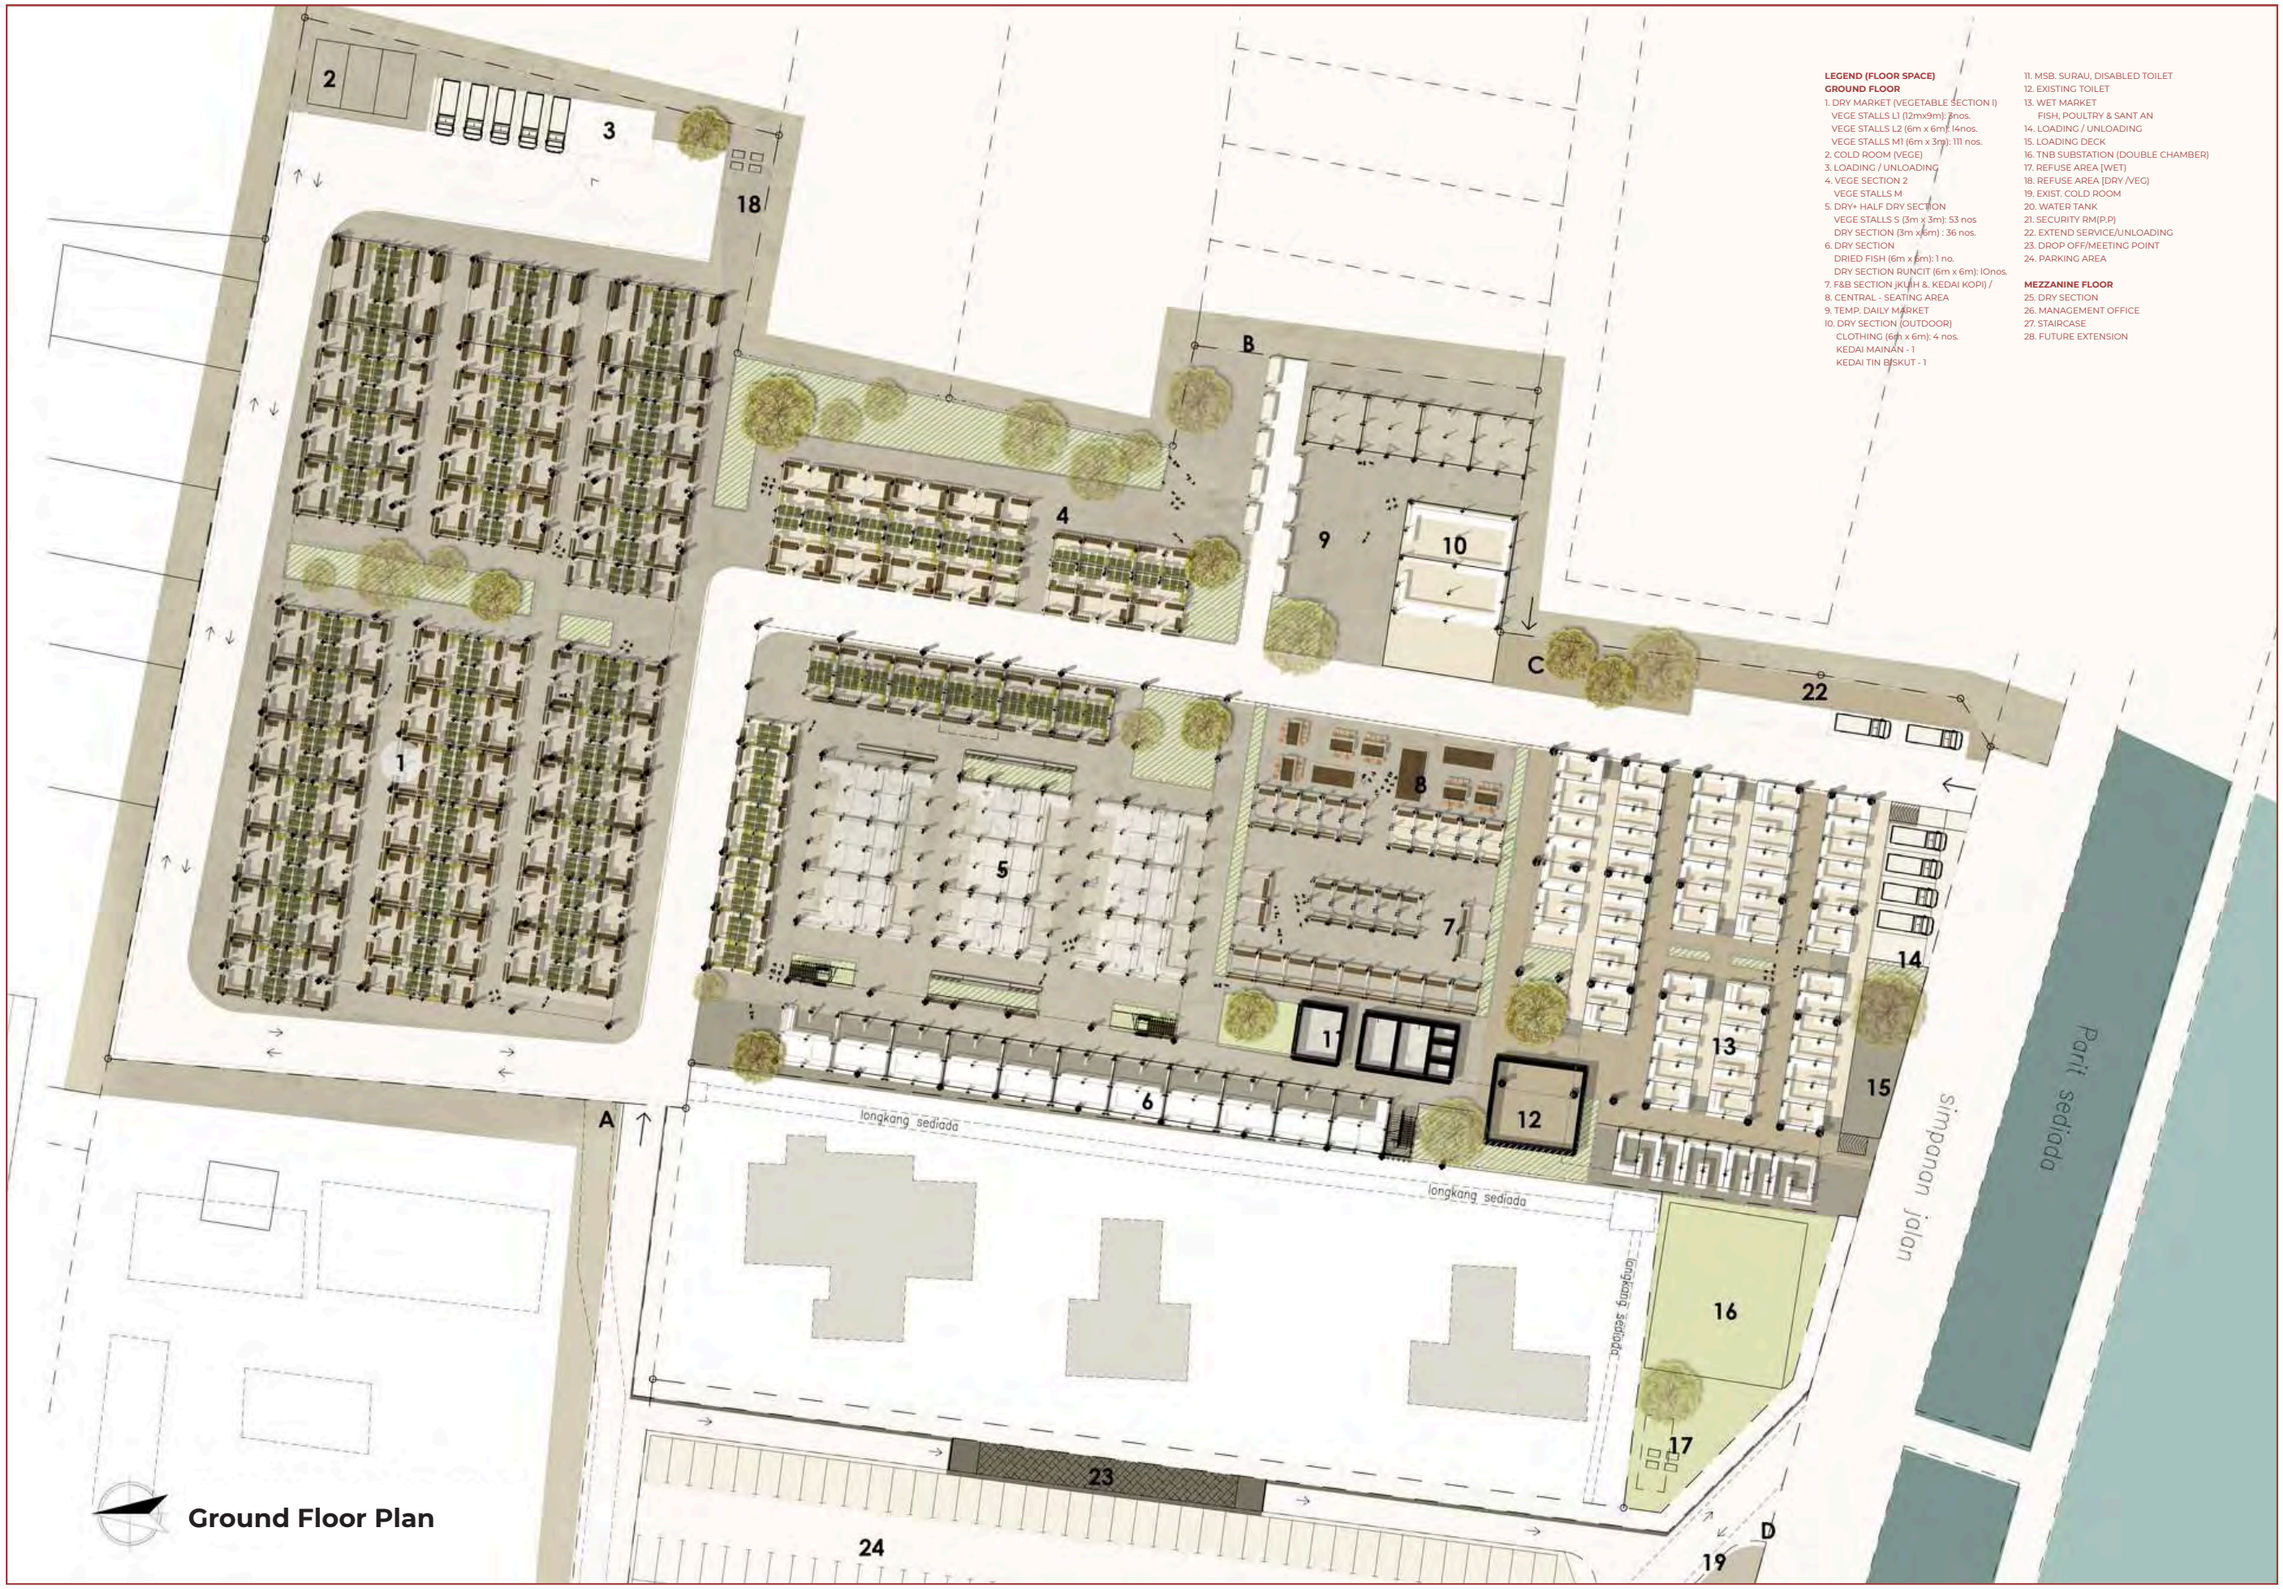

“Shifting Phases” reflects the changing rhythms of activity, from the pre-dawn wholesale market to the temporary stalls that continue into the afternoon, shaping everyday community life.

“Living Phases” highlights the market’s adaptability through modular, cradle-to-cradle design, allowing spaces and components to be reused, expanded, and transformed sustainably over time.

Together, these concepts position the market as a flexible and evolving infrastructure that responds to social, environmental, and cultural needs.

Where We Belong

A Retreat for Pause, Relax and Belonging

Final Year / Design Studio 6
Site/ Kuah, Langkawi, Kedah
Project Type/ Holiday Residence
Instructor/ Prof Ramli, Ar Poh Zhi Ni
Category/ Academic Graduation Project

The Coastal Village is a restorative holiday retreat designed to strengthen community bonding while offering a sanctuary from the pressures of fast-paced urban life. The development reinterprets village living through a network of interconnected residential clusters, shared courtyards, and communal spaces that encourage interaction, connection, and a sense of belonging.

Rather than a conventional resort, The Coastal Village is envisioned as a living community - where architecture fosters relationships, encourages interaction, and supports a slower, more meaningful way of living.

Site Response

CIRCULATION
Proposed Entrance, Exit, Drop Off & Service Road

VIEW
Limited external views are compensated by creating internal views through courtyards and landscaped spaces.

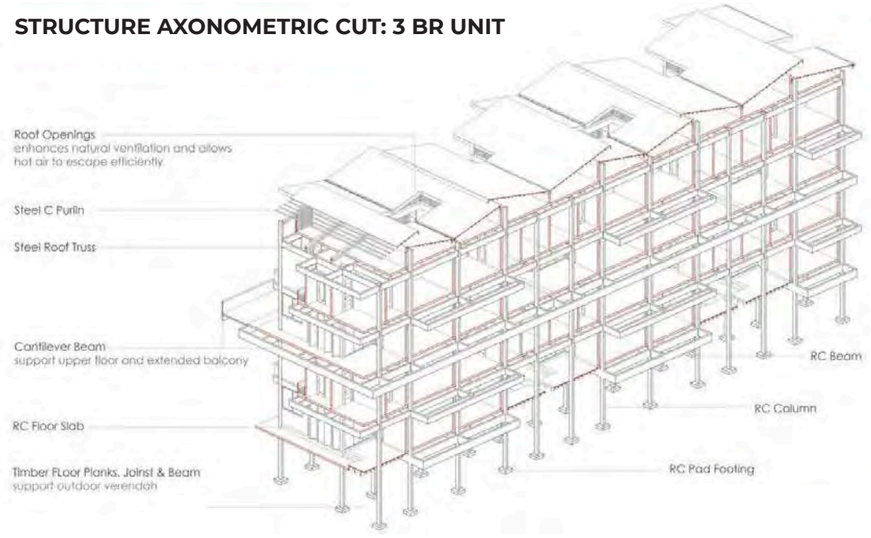

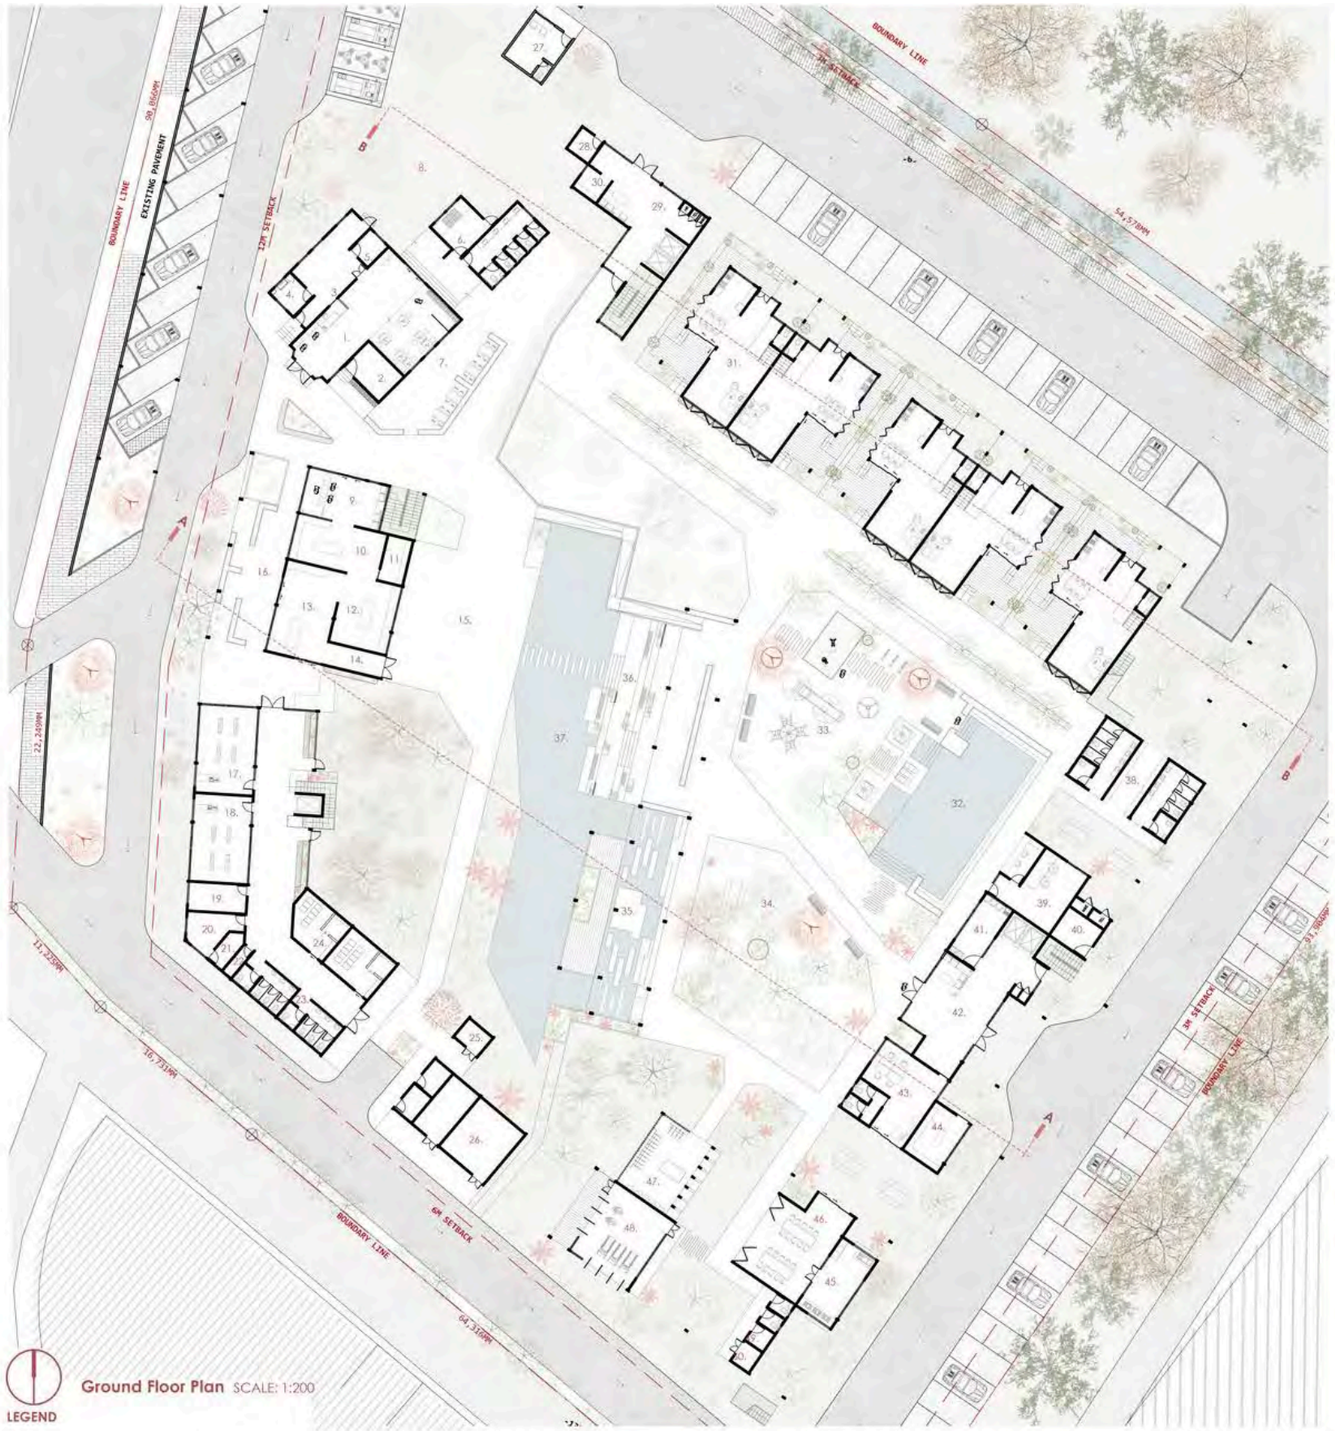

NOISE & ZONING
Noise from the main road is mitigated by placing commercial and café functions along the frontage, acting as a buffer to quieter residential zones.

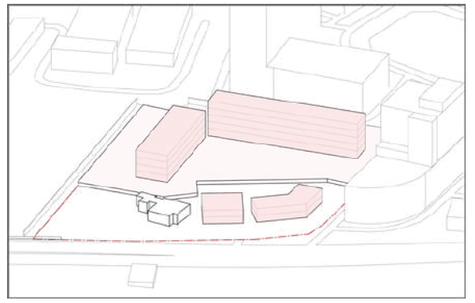

VEGETATION & WIND
Existing trees are preserved, while additional roadside planting enhances privacy and reduces noise. Northeast and southwest winds converge at the retention pond, creating a ventilation node that distributes airflow across the site.

STRUCTURE AXONOMETRIC CUT: 3 BR UNIT

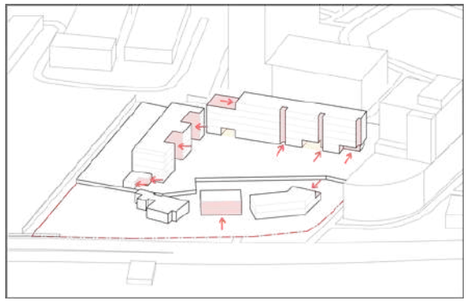

Design Morphology

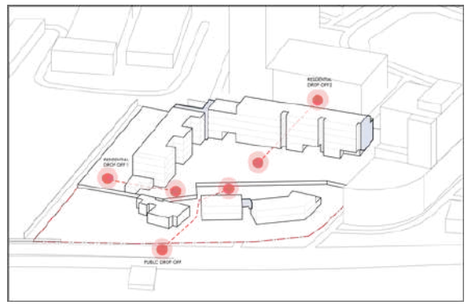

VOLUMETRY

Building masses are broken into smaller volumes to create a human-scaled, village-like environment instead of a monolithic block.

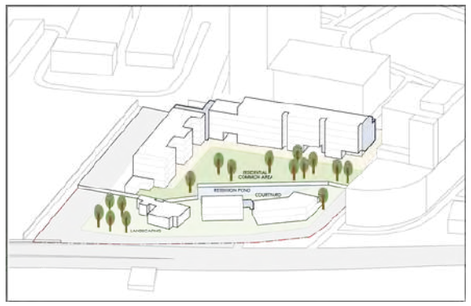

DEPTH & POROSITY

Articulated façades and fragmented massing introduce depth and allow wind, light, and views to pass through the development.

SEAMLESS CONNECTIVITY & LINKAGE BETWEEN BLOCKS

Blocks are interconnected through shaded walkways, courtyards, and green linkages to ensure smooth movement and continuous spatial flow.

HARDSCAPE & SOFTSCAPE

A balanced integration of hard and soft landscape elements defines circulation while enhancing greenery, comfort, and the overall environmental quality.

TRADE THROUGH TIME

Evolution of Hat Yai's Night Market

Sophomore Year / Design Studio 4
Site/ Hat Yai Municipal Park, Hat Yai, Songkhla, Thailand
Project Type/ Community Pavilion
Instructor/ Ts. Noorul Fadzlee Khamis, AR. Haziqah Hamzah
Category/ Academic Graduation Project

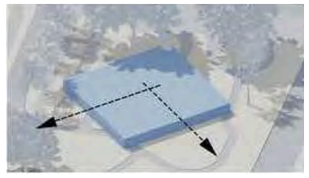

Hat Yai's night markets are integral to its cultural and economic growth. The pavilion narrates their evolution, immersing visitors in a market-like atmosphere. As they explore, the design reveals how these markets emerged.

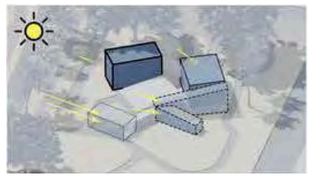

Design Morphology

POSITIONING / ORIENTATION
Align building to face East, clear axis for entrance.

NATURAL LIGHTING
The form densifies, symbolizing day to night and shaping lighting.

SEGREGATION
The concentric form has a central space & surrounding area, reflecting a market.

NATURAL VENTILATION
Open spaces harness natural ventilation to enhance sound and smell.

ZONING
The surroundings are divided into 4 spaces to convey the pavilion's narrative.

LANDSCAPING
Additonal of water feature and central courtyard reinforces the concept.

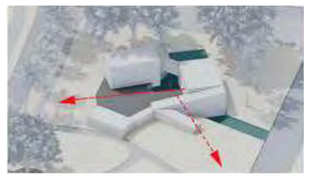

LEVELING
Incorporate levels designed to reflect layouts of respective inspiration markets.

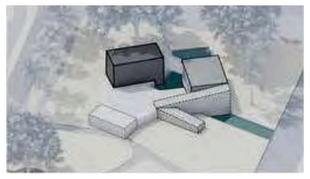

FINAL FORM
Incoporate additional details to enhance the pavilion's clarity.

Market Evolution

AXIS
The form follows an axis line based on the site response.

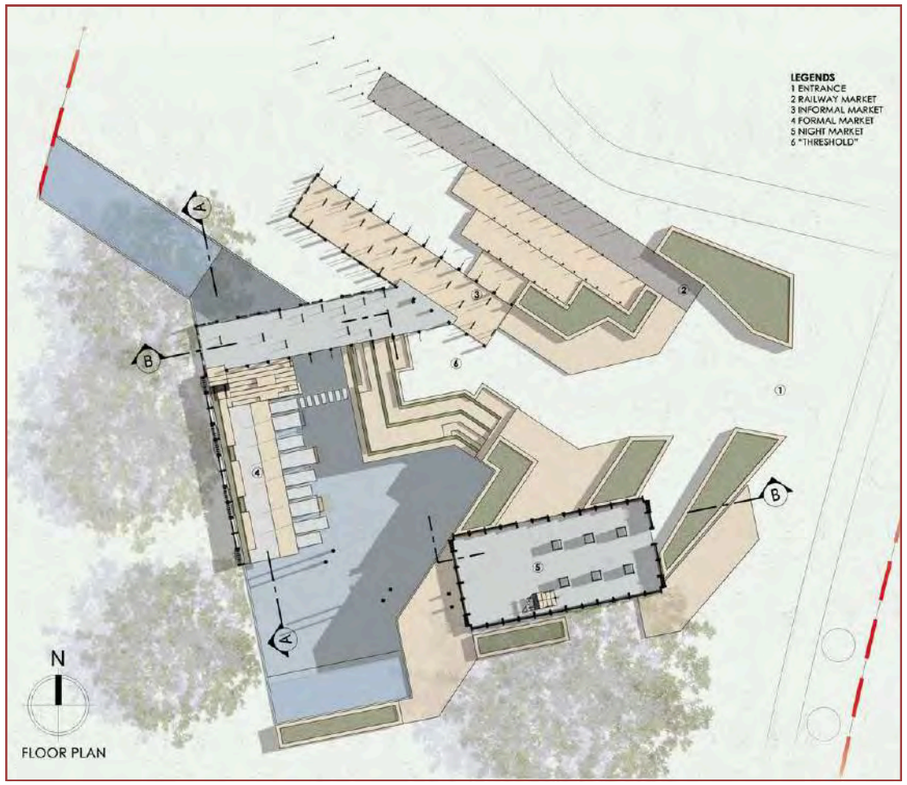

SOLIDITY
The space shifts from open to enclosed, symbolizing market culture solidification.

LIGHT INTENSITY
The journey moves from daylight-lit spaces to dim evening lighting.

MAPPING
The spaces recreate the atmosphere & key eras layout in HatYai's market history.

Formal Market Mezzanine Floor View

Site Response

NATURAL LIGHTING

Each space is designed to utilize natural lighting, aligning with the characteristics of the markets represented in each narrative.

WIND DIRECTION

Areas that highlight sound, smell, and taste are positioned along the strongest wind flow, allowing the breeze to carry these sensory experiences throughout the space.

ACCESS & CIRCULATION

The entryway is located on the East of the site, adjacent to the existing road, ensuring convenient access to enter the pavilion.

West Elevation

East Elevation

South Elevation

North Elevation

Sensory Diagram

Sight
A shift from brightness to dimness marks a change in time, with subtle lighting recreating the ambiance of a night market.

Smell & Taste
Herbs and spices line the walls, their scents carried by the wind.

Touch
Interactive water elements evoke the feel of a floating market.

Touch
Visitors navigate tightly spaced panels, mimicking a bustling market, with fabric textures enriching the tactile experience.

Sound
Kinetic mechanisms replicate railway track sounds, while gravel underfoot enhances the auditory and tactile experience.

TIDESMITH ATELIER

A Retreat for Pause, Relax and Belonging

Sophomore Year / Design Studio 5
Site/ Pulau Duyong, Kuala Terengganu, Terengganu
Project Type/ Boat Making Academy
Instructor/ DR. Zunaibi Abdullah
Category/ Academic Graduation Project

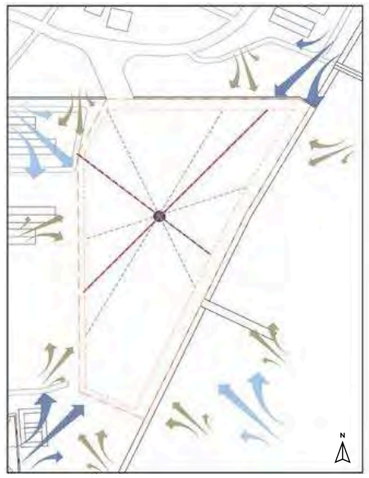

Where Timber Meets the Tide

"From Timber to Tide" celebrates the living heritage of Pulau Duyong's boat-making tradition, where land, craft, and sea exist in seamless rhythm. Timber represents the wisdom of the past — shaped by human hands and cultural memory — while the tide symbolizes movement, adaptation, and renewal. The Boat-Making Academy is designed as both vessel and journey, guiding visitors from the grounded warmth of the workshops to the open embrace of the sea. Through its spatial flow, material honesty, and wind-driven circulation, the architecture becomes a teaching tool — reminding every maker that their craft, like the tide, is ever-evolving yet deeply rooted in tradition.

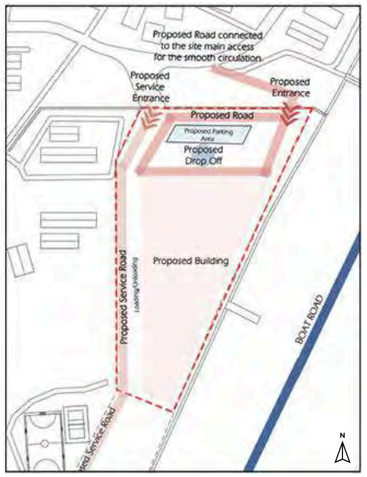

Standing at the edge of land and sea, the academy opens to the tide — a living reminder that tradition flows forward with every wave.

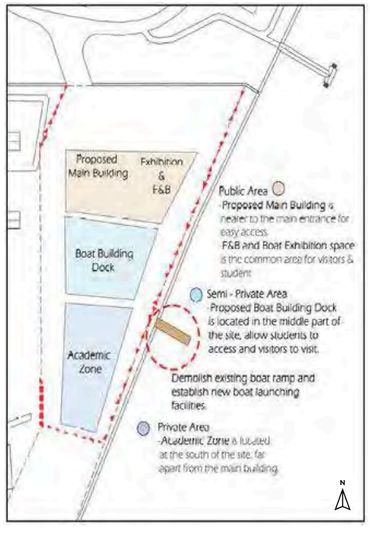

Site Response

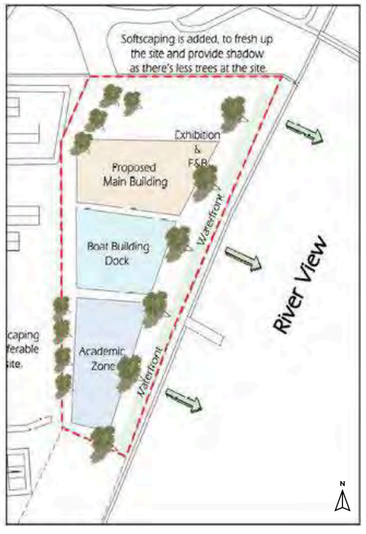

Breezeway Circulation
Monsoon and prevailing winds shape the breezeway circulation, forming the academy's main spine, with their intersection creating a central courtyard for gathering and wayfinding.

Vehicular Access
A coastal site with river access, featuring a proposed entrance, internal road, parking, drop-off, and service access along the inland edge, accommodating the Boat-Making Academy and student accommodation.

Zoning
The site is zoned from public to private: the main building (exhibition and F&B) near the entrance, the boat-building dock as a semi-private central area, and the academic zone at the southern end for privacy, with a new boat launching facility replacing the existing ramp.

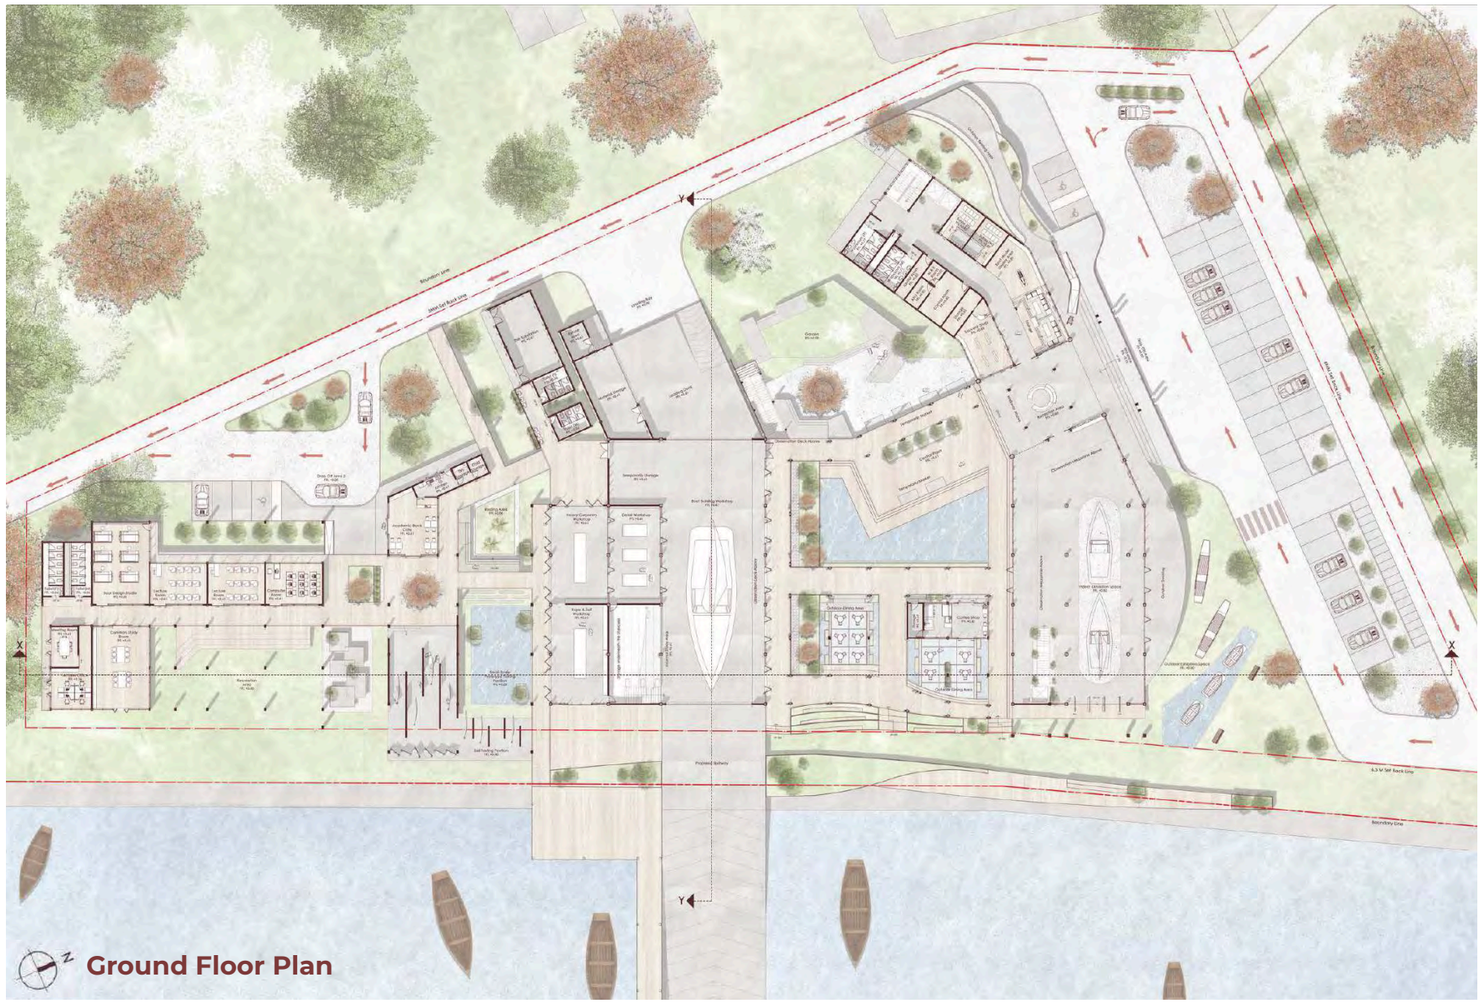

View
The main building, exhibition & F&B are placed along the riverfront for views and access, with the boat-building dock and academic zone behind. Softscape added due to limited trees, while the waterfront edge enhances river views and environmental quality.

Tidesmith Atelier

Speaks of makers who shape more than timber — they forge with wind, tide, and time.

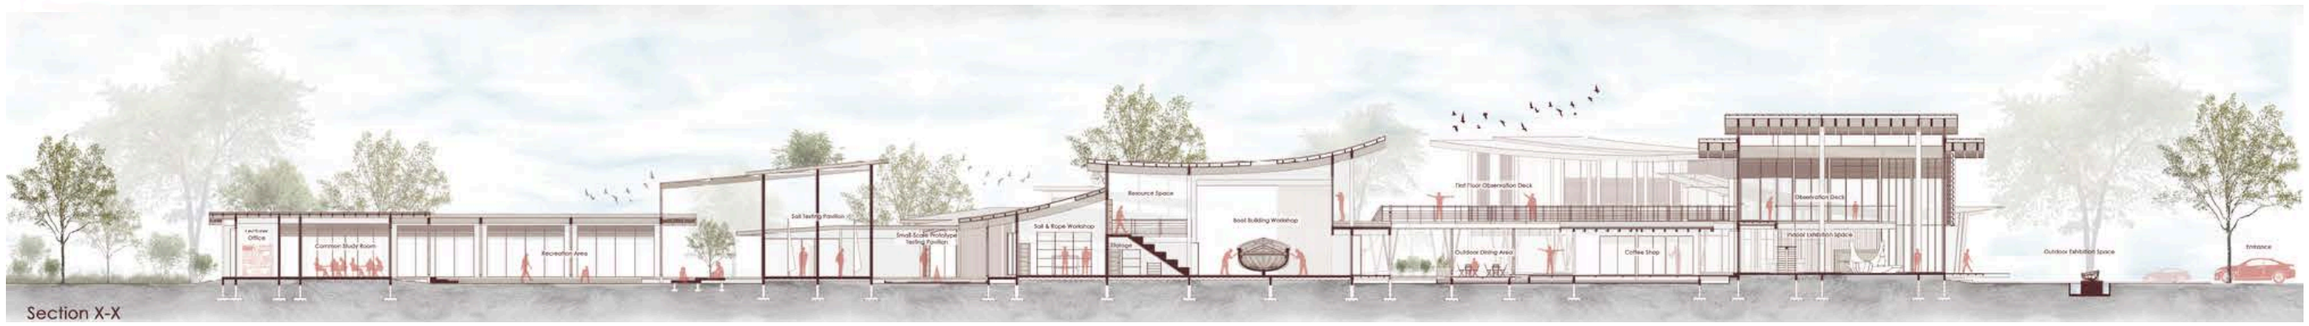

Like a blacksmith of the sea, the tidesmith listens to currents, honours heritages, and crafts vessels that carry stories forward. The name evokes a poetic union of craft and nature: where hands carve memory, the wind guides purpose, and the tide breathes life into every creation.
